

HAMPDEN-SYDNEY COLLEGE

June 17, 2017

To Whom It May Concern:

Attached please find the annotated files for KittenMittens, a *Mycobacterium smegmatis* bacteriophage isolated and characterized by the students of Hampden-Sydney College. As this was a straightforward bacteriophage, we do not have any significant trouble spots to bring to the attention of the quality control team. Thank you as always for the hard work that the SEA-PHAGES team does to make this opportunity a reality for my students!

Sincerely,

A handwritten signature in black ink that reads "Michael J. Wolyniak".

Michael J. Wolyniak
Elliott Associate Professor of Biology
Hampden-Sydney College
