

## **Order Information for Additional Actinobacterial Hosts**

The hosts that are listed on this site have been tested for basic growth conditions and lawn formation. In general we are using BSL1 organisms that are easily adaptable for classroom use.

We are currently sourcing Actinobacteria from ATCC and NRRL (USDA-ARS). Guidelines for ordering strains are provided at each website.

[Click here](#) to be directed to the ATCC website.

[Click here](#) to be directed to the USDA website (ARS/NRRL collection).

Note: Though the USDA website states you can ask for 24 strains/lab in a given calendar year, their curator has asked that we limit our requests to no more than 12. We ask that you start with one (1) strain initially.
