Genome Annotation Submission Cover Sheet

Preliminary Annotation Review Checklist 5-15-2018

Phage Name: Atraxi

Your Name: Amy B. Sprenkle

Your Institution: Salem State University

Your email: asprenkle@salemstate.edu

Additional emails: amy.sprenkle@gmail.com
(For correspondence)

Please check each box indicating completion of each task. If you are not sure how to do something, please see the Online Bioinformatics manual page "How to Pass Preliminary Review".

- [✔] 1. Does the genome sequence in your final contain the same number of bases and is it the same as the posted sequence on phagesdb.org?
- [✔] 2. Are all the genes "valid" when you click the "validate" button?
- [✔] 3. Have the genes been renumbered such that they go sequentially from 1 to the highest number?
- [✔] 4. Have all old BLAST hits been cleared, and all gene features reBLASTed?
- [✔] 5. Are the locus tags the"SEA_ PHAGENAME"?
- [✔] 6. Has the Documentation been recreated to match the information in the feature table?
- [✔] 7. Have tRNA ends been adjusted with web-based Aragorn and/or tRNAscan SE?
- [✔] 8. Has the frameshift in the tail assembly chaperone been annotated (where applicable?)

9. For the items below, generate a genome profile, and review the following. For the

YourPhageName_CompleteNotes.dnam5 file:

- [✔] a. Have any duplicate genes (or any with the same stop coordinate?) been removed?
- [✔] b. Does every gene have **one and only one** complete set of Notes
- [✔] c. Do the functions in the Notes match the official function list?
- [✔] d. Are all three lines of functional evidence described for EVERY gene?
- [✔] e. Do the notes contain the initial Glimmer/GeneMark data from the autoannotation?

For the YourPhageName .dnam5 file:

- [✔] a. Have any duplicate genes (or any with the same stop coordinate?) been removed?
- [✔] b. Is the Notes field empty (including hidden marks?)
- [✔] c. Do the function names in the Product field either match the official function list or say "Hypothetical Protein"?
- [✔] d. Is the Function field empty (including hidden marks?)

- [✔] 10. Did you use PECAAN to annotate your phage?

   If, so please describe how in the text field after question 11.

11. Describe any issues or specific genes that you were unable to satisfactorily resolve, and warrant further inspection in the Quality Control review.

Atraxi is a podo and has 2 genes that cover bp 1 in the reverse frame. There are no tRNAs or programmed translational frameshifts. Regarding the overlap of bp1, I consulted the Forums and the PGG. The documentation in the PGG for genes that cover bp 1 is not up to date for the Microbacterium phages, and in the Forums, there is a discussion of this area in "Function for Gene 1 in EK1 Phages". Atraxi is EK2, but there are some similar hits for sigma factors. Our annotation still calls this hypothetical, but I am still worried about the numbering and I'm not sure about the circular permutation bit. I relied on the import from PECAAN to do this correctly.
