Dear Annotation Quality Control Team:

Mufasa is the first annotated sequence sent for review by Georgia Gwinnett College. Mufasa was found in Dr. Latanya Hammonds-Odie's class by her student (Damion Coleman) but was annotated by my students (other student authors on the sheet). Since this is our first submission, I hope more scrutiny will be placed and some information on how to improve in the future submissions would be appreciated.

Notes:

- The frame shift position was provided by Deb Jacobs-Sera, so it should be accurate. But please make sure that the DNA Master file is correctly formatted to indicate this.
- The functions typed in the function box were determined by Phamerator, unless both NCBI and HHPred agreed upon a different answer.

I look forward to any instructions that you can provide to make my submissions better for your team.

Sincerely,

Dr. Alessandra "Ali" Barrera
