

Actinobacteriophage Genome Annotation Submission Cover Sheet

This Cover Sheet will accompany each genome's annotation file(s) submission and succinctly describe the work that your students and you have done. This document ensures that the work done was as complete and thorough as it could be. Most important to the QC reviewer, denote where the trouble spots were in your annotation and how they were resolved.

Phage Name. **Tutumahutu**

Your Name. Amanda Freise

Your Institution. UCLA

Your email. afreise@ucla.edu

Additional emails. (for correspondence).

Describe any issues or specific genes that you would like to highlight for the QC reviewer. This includes any genes that you had questions about or received help with or that warrant further inspection in the QC review process. Include those genes that you deliberated on and/or want to strongly advocate for. If you contacted SMART, workshop facilitator, or a buddy school for help, please document.

Thanks to the recent cluster AZ harmonization of annotations, this genome was very straightforward to annotate. Just two genes with some concern:

Stop @ 29597: Not sure if real gene. Good CP on Genemark-S. Fills gap, but all other phages in AZ EXCEPT Amyev have left a gap here. This region of ~5 genes has a lot of variability between the two large genes.

Stop @ 32323: The first start site (32021, gap -4) has 103/106 MA's in the pham, but there is another start site (32024, gap -1) that according to the new data about tandem start sites should be the correct one. The only other phage that has both start sites and calls the second start is Powerpuff. Since Powerpuff called the second one and this was in the harmonization update, I am calling the second start site.

Please record yes/no for each of the questions below. If further explanation is needed, please add this item to the above box.

In the submitted DNA Master file (Yes/No):

Yes 1. Does the genome sequence in your submitted DNA Master file match the nucleotide fasta file posted on phagesDB (same number of bases, no N bases, etc.)?

Yes 2. Are all the genes 'Valid' when you click the [Validation button](#)?

Yes 3. Are the genes (and matching LocusTag numbers) [sequential](#), starting with #1, counting by 1s.

Yes 4. Are the Locus Tags the "[SEA PHAGE NAME](#)" format?

Yes 5. Has the [documentation been recreated](#) from the Feature Table to match the latest file version?

Yes 6. Have tRNAs followed the [tRNA protocol](#), **COPYING** tRNA-AMINOACID type (DNA equivalent of the anti-codon) from Aragorn output - tRNA-Gln(ctg) - AND the ends been adjusted to match the Aragorn output?

Yes 7. Has the [frameshift in the tail assembly chaperone](#) been annotated correctly (if applicable)?

No 8. Have you cleared your Draft Blast data and have you [re-Blasted](#) the submitted DNA Master file?

I was unable to re-BLAST within DNA master and have yet to figure out what the issue is. I've tried troubleshooting this and am able to complete the BLAST, but the BLAST results never save to the file. Debbie said it would be fine for now to note this here and submit.

Yes 9. Has every gene been [described and supported in your Supporting Data file](#)?

Yes 10. Did you investigate '[gaps](#)'?

Yes 11. Did you [delete the genes](#) that you meant to delete?

Now, [make a profile of the file](#) you plan to send. (And you can save this file for [Review to Improve!](#))

Yes 1. Have any duplicate genes been deleted?

Yes 2. Has the Notes field been cleared (using the automated buttons)?

Yes 3. Do the gene numbers and locus tags match?

Yes 4. Are the correct Feature_Types correctly selected (most will be ORFs, but check that tRNAs and tmRNAs are correctly labeled)?

Yes 5. Do the function names in the Product field either match the official function list or say "Hypothetical Protein"?

Yes 6. Has the Function field been cleared (using the automated buttons)?

How are you documenting your gene calls in class? Choose any/all that apply:

- X PECAAN output
- DNA Master shorthand (previously used format)
- X Spreadsheet
- Powerpoint
- Word document (must be easily searchable)
- Other: Describe.

What is the file type (sort) submitted for QC to document your gene calls? Choose only one.:

- X PECAAN output
- DNA Master shorthand (previously used format)
- Spreadsheet
- Powerpoint
- Word document (must be easily searchable)
- Other: Describe.
