

Restriction enzyme digests of *Maynay* and *Lambda* genomes. Purified *Maynay* and *Lambda* genomic DNA were digested following addition of the indicated restriction enzymes at 37°C for an hour, with the exception of TaqI, which was incubated at 55°C. 10 uL of *Maynay* DNA and 4 uL of *Lambda* DNA were used per lane. The samples were run on a 1% agarose gel alongside a 100 bp DNA ladder and imaged.
