

**Transmission electron micrograph of bacteriophage Bunky.**

TEM image was taken using a JEOL JEM-1400Flash Electron Microscope at the University of Ottawa. TEM image was adjusted using FIJI. The average capsid width is  $89.99 \pm 1.17$  nm and the average tail length is  $73.73 \pm 5.20$  nm. The average measurements were calculated across 5 images, and the standard error of the mean (SEM) was determined for both measurements ( $n = 5$ ).
