

Figure 1. Plaque picture of Maaf phage. The Maaf phage was collected from a sunflower bed, in Gloucester, Ottawa (45.3925875, -75.6410781), from a rich organic, dense and moist soil, at an ambient temperature of 26°C. This image was taken following a final round of phage purification, after performing a plaque assay with an *A. globiformis* 4225 host culture.
