

**Isolation site and plaques of phage *Zucchaurescens*.** (left) *Zucchaurescens* was isolated from soil dug from under the row cover of a yellow zucchini plant on FieldTrip farm. (right) ~200 phage of purified *Zucchaurescens* were mixed with *Arthrobacter aurescens* B-2879 and plated with top agar on PY plates. Plates were incubated for 2 day sat 30° C and imaged.
